

Switchgear for Data Centers

TAILORED POWER SOLUTIONS

We specialize in customizable design and build switchgear tailored to your data center's exact specifications.

Solutions such as our UL891 switchboards are engineered to meet your exact power needs and offer a variety of main breaker options for optimal performance and compatibility. We offer low lead times and flexible configurations to keep your project on schedule without sacrificing quality.

LOW-VOLTAGE SWITCHGEAR

Experience a seamless blend of modern design and real-world functionality with our low-voltage switchgear and UL891 switchboards. Engineered for optimized power management, our solutions combine intuitive features, premium-grade components, and innovative engineering to deliver dependable, practical, and world-class performance. A wide variety of configurations, including 480V, are available.

STANDBY POWER SOLUTIONS

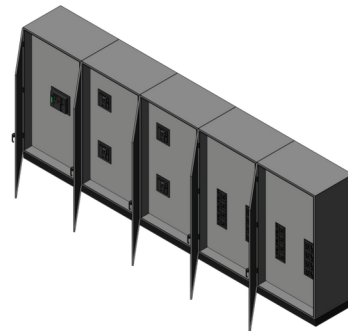

Reliable backup power is critical for maintaining uptime and protecting your data center's mission-critical operations from unexpected power outages.

Our power distribution equipment streamlines generator connections and supports efficient electrical distribution for uninterrupted power during utility grid failures.

We offer fully customizable units with minimal lead times to meet the unique space, scalability, and electrical requirements of your data center.

UL891 SWITCHBOARDS

Enjoy steady power distribution, enhanced safety, and elevated load control. This professional-grade unit is ideal for maintaining uptime and supporting scalability in data centers.

TRANSFORMER CARTS

We offer a full line of industrial-grade Transformer Distribution Units for safe, scalable, and effective electrical conversions with optional overload protection.
